Staeafa Announces New TALON HVAC Control System

Buffalo Grove, IL, Jan. 28, 2002 - Staeafa Control System® announces TALON® - an all new HVAC control system. TALON is a true top to bottom open protocol system, using native LonMark® controllers. It combines the system level applications, network management and programming tools to optimize open system facility management. Its powerful building control applications run seamlessly with various communication protocols.

TALON is a complete system that offers perfect fit system scalability through a wealth of control options. It features an Internet based Graphical User Interface, network management and engineering tools **powered by Niagara Framework®**, and an all new family of native LonMark programmable and application specific controllers. To round out the system, Staeafa TALON Dealers offer the full line of Siemens® end devices: valves, sensors and actuators.

Tom Carlin, HVAC Products Business Unit President exclaims, "TALON is the best total package in open systems building controls. It brings amazing ease of use and flexibility to the user by normalizing data into a common format that can be viewed, commanded and programmed over the Internet. And it incorporates everything from the latest advances in communications technology and a new family of packaged and programmable HVAC controllers to the Staeafa TALON Dealer's single source offering of controls, end devices, training and customer satisfaction!"

TALON offers real open systems interoperability, which means controller data sharing and reporting between multiple protocols for effective facility management is a reality. Internet system access, control and editing for ease of use is a reality. Off-site system programming and maintenance for efficient control is a reality. All this capability is securely delivered to any networked, dial-up, or Internet enabled PC or wireless device.

Since 1962, Staeafa Control System has been a leading manufacturer of building control systems. Today, as part of Siemens Building Technologies, Inc., Staeafa leads the industry with the new TALON open protocol building control system. Authorized Staeafa dealers throughout the U.S. and Canada provide the best in open systems and customer service.
