Tridium Expands Production Facility

RICHMOND, Virginia August 4, 2005—Tridium, Inc. today announced the expansion of its Richmond based production and distribution facility. Continued strong sales from existing customers and growth from new market segments led the company to expand this facility in order to increase production volume.

Tridium expanded the facility to boost the capacity for licensing and commissioning its Niagara Framework® software and to enhance the assembly and distribution of its JACE® hardware products. JACE's bundle the Niagara software in a hardware platform designed to meet the needs of specific market applications.

The expansion more than doubles manufacturing space and includes the addition of an advanced, QA and Testing Lab. The new custom-designed facility creates an environment that lends itself to maximum efficiency. The company expects the expansion to ultimately increase overall capacity by more than 50%.

"The primary drivers behind our production expansion are the rapid acceptance by a variety of new partners that see the value of Niagara to control, monitor, and manage data from their operational assets in real-time, the strong demand from existing customers around the world and the tremendous response to our new Niagara AX release," said John Petze, president and chief executive officer for Tridium, Inc.

About Tridium, Inc.

Tridium is the inventor of the Niagara Framework®, an open software framework that integrates diverse systems and devices—regardless of manufacturer, communication standard or software—into a unified platform that is easily managed and controlled in real time over the Internet or intranet using a standard web browser. System integrators use Niagara products to provide true open solutions without regard for specific protocols, products or technologies. Manufacturers adopt the Niagara Framework technology to move their products to the web, reduce development time, migrate legacy systems, develop new service offerings, and open up new markets. Today, there are over 35,000 instances of Niagara operating in over 5000 installations worldwide in applications that include: energy management, building automation, telecommunications, M2M, security automation, lighting control, maintenance repair operations (MRO), service bureaus and total facilities management – all realizing improved operational efficiencies, reduced costs and greater returns.

Tridium is a privately held software company headquartered in Richmond, Va., with subsidiaries based in London and Singapore. Tridium markets its products to value-added resellers, original equipment manufacturers and a network of Tridium Systems Integrators. Additional information about Tridium is available at www.tridium.com.
