

NEWS RELEASE

Tridium to Exhibit Industry-Leading Independent Software Platform For Device Integration and New Generation Embedded Controller/Server Platform at the 2006 AHR Expo®

RICHMOND, VIRGINIA December 19, 2005—Tridium, Inc., the market leader for integrating automation systems and smart devices into unified systems, regardless of network or protocol, today announced that it will exhibit its industry leading Niagara^{AX}® Framework and the latest addition to its line of Niagara-based controller/server products, the JACE-2, at the 2006 AHR Expo in Chicago, IL. Tridium's Niagara^{AX} solution and JACE-2® will be on display with a variety of application demonstrations at AHR Expo booth # 1733, North Hall, McCormick Place, January 23-25, 2006.

Niagara^{AX} is a complete, protocol independent software platform that meets the complex challenges of providing seamless connectivity and control between diverse end devices and enterprise applications. Whether based on BACnet®, LonWorks®, MODBUS®, SNMP, OPC, oBIX or a host of legacy protocols, Niagara^{AX} connects almost any device imaginable, regardless of manufacturer or communication protocol..

The company will also be showing its new JACE-2 controller/server platform, which makes it possible to bring Internet connectivity closer to end devices in monitoring, control, and M2M applications. The product's modular design and flexibility allows for easy installation and distribution of connectivity and control more widely across all types of environments. The JACE-2 is expandable and features multiple I/O modules that save engineering time and installation cost.

"OEMs and System Integrators are constantly examining ways to unify the diverse systems and equipment found in today's facilities to deliver multi-system interoperability and more efficient operations, said Marc Petock, Director of Marketing for Tridium. As they evaluate technology, Tridium continues to push the envelope and deliver the proven software platform and embedded controller devices needed to enable them to deliver a complete and affordable solution to their customers."

About Tridium, Inc.

Tridium, a global software and technology company, is the inventor of the Niagara Framework®, a software framework that integrates diverse systems and devices - regardless of manufacturer, or communication protocol - into a unified platform that can be easily managed and controlled in real time over the Internet using a standard web browser. Niagara is an extensible platform that supports the rapid development of a wide range of Internet-enabled products and device-to-enterprise applications.

Manufacturers adopt the Niagara Framework technology to move their products to the web, reduce development time, migrate legacy systems, develop new service offerings, and open up new markets. System integrators use Niagara products to provide true open solutions without regard for specific protocols, products or technologies. Today, there are over 50,000 instances of Niagara operating in over 6,000 installations worldwide in applications that include: energy management, building automation, M2M, telecommunications, security automation, lighting control, maintenance repair operations (MRO), service bureaus, convergence retailing and total

facilities management – all realizing improved operational efficiencies, reduced costs and greater returns.

Tridium markets its products to value-added resellers, original equipment manufacturers and a network of Tridium Systems Integrators. The company is an independent business entity of Honeywell International Inc. Additional information about Tridium is available at www.tridium.com.
