

FOR IMMEDIATE RELEASE

Tridium Unveils Vykon Security™ at ASIS 2006

*First security system specifically designed to seamlessly connect to building control systems
New, web-based, integrated access control system easily managed via a web browser*

RICHMOND, Virginia September 25, 2006-Tridium Inc., the leading provider of device integration and Internet-based control applications today introduced Vykon Security™, a web-based access control and alarm monitoring security system. Vykon Security provides security administrators with integrated management of access control, alarm monitoring and personnel credential management in real-time via any standard web browser.

As the first security system to be built on the highly successful Niagara^{AX}® Framework, the industry's leading facility management software platform, Vykon Security can connect to any building automation system and be seamlessly integrated into the HVAC, lighting and energy management systems within a facility.

The heart of Vykon Security is its advanced Security Appliance, an IP, based controller that eliminates the need for on-site PC's or thick client software and is capable of storing thousands of credentials and controlling multiple doors. Some of the other advanced features include:

- IT connectivity includes XML, oBIX, SNMP
- Intuitive real-time alarm and activity monitoring console
- Comprehensive pre-defined or as hoc reporting on screen or exported
- Support for Anti-Passback and Time and Attendance
- Connectivity to any BAS system via BACnet®, LonWorks®, Modbus®, and oBIX

Vykon Security is part of the Vykon suite of controller/server products, software applications and tools, designed to integrate a variety of devices and protocols into unified, systems in building automation, energy and security. "Vykon Security offers a web-based, modular security solution for our customers," said Marc Petock, Tridium's Director of Marketing. "With concern for security only increasing, Vykon Security offers managers a cost-effective and easy-to-manage solution that joins with their existing systems."

About Tridium Inc.

Tridium, a global software and technology company, is the inventor of the Niagara Framework®, a software framework that integrates diverse systems and devices - regardless of manufacturer, or communication protocol - into a unified platform that can be easily managed and controlled in real time over the Internet using a standard web browser. Niagara is an extensible platform that supports the rapid development of a wide range of Internet-enabled products and device-to-enterprise applications.

Manufacturers adopt the Niagara Framework technology to move their products to the web, reduce development time, migrate legacy systems, develop new service offerings, and open up new markets. System integrators use Niagara products to provide true open solutions without regard for specific protocols, products or technologies. Today, there are over 50,000 instances of Niagara operating in over 6,000 installations worldwide in applications that include: energy management, building automation, M2M, telecommunications, security automation, lighting control, maintenance repair operations (MRO), service bureaus, convergence retailing and total facilities management – all realizing improved operational efficiencies, reduced costs and greater returns.

Tridium markets its products to value-added resellers, original equipment manufacturers and a network of Tridium Systems Integrators. The company is an independent business entity of Honeywell International Inc.
