

Tridium Announces Record Attendance at 2007 European Niagara Forum

Amsterdam, The Netherlands, November 1, 2007 – Tridium Inc., the leading provider of device integration and Internet-based control applications announced today that its 2007 European Niagara Forum held on October 18th and 19th in Amsterdam was a tremendous success with attendance increasing by 60% over the previous conference.

This year's conference attracted a record number of integrators, consultants, manufacturers, end-users and developers from 16 countries throughout Europe and the Middle East with every segment of the Niagara Community well represented.

The Niagara Forum along with the bi-annual Niagara Summit held in the United States are the definitive conferences for industry professionals and practitioners developing applications and deploying solutions built around open, interoperability, integration and connectivity.... all things Niagara.

The Niagara Forum offered sessions on significant industry topics including Smart Services, the Operation of Sustainable Buildings and Cisco's Connected Real Estate Initiative. In addition, there were several breakout tracks and workshops that covered a wide range of business and technical topics. Attendees also exchanged ideas, discovered the latest next-generation Niagara based solutions and forged partnerships with fellow Niagara Community colleagues.

Marc Petock, director of global marketing & communications attributed the success to several factors including "the continued growth of Niagara as the automation infrastructure technology of choice for connecting devices and equipment systems into unified systems, as well as new Niagara-based products and applications that have been recently introduced into the market."

Commenting on the event, Terry Casey, Managing Director EMEA for Tridium, said "The impressive increase in attendance reflects the strong state of the industry throughout Europe and the Middle East as well as the developing market for smart services and converged IP based solutions coming together within the Niagara Ecosystem to provide real cost and operational benefits for users who deploy this technology".

The next Niagara Community event, the 2008 Niagara Summit takes place May 4-6, 2008 in Tampa, Florida. Additional information can be found at www.niagarasummit.com.

About Tridium Inc.

Tridium, a global software and technology company, is the inventor of the Niagara Framework®, a software framework that integrates diverse systems and devices - regardless of manufacturer, or communication protocol - into a unified platform that can be easily managed and controlled in real time over the Internet using a standard web browser. Niagara is an extensible platform that supports the rapid development of a wide range of Internet-enabled products and device-to-enterprise applications.

Manufacturers adopt the Niagara Framework technology to move their products to the web, reduce development time, migrate legacy systems, develop new service offerings, and open up new markets. System integrators use Niagara products to provide true open solutions without

regard for specific protocols, products or technologies. Today, there are over 90,000 instances of Niagara operating in over 6,800 installations worldwide in applications that include: energy management, building automation, M2M, telecommunications, industrial, security automation, lighting control, maintenance repair operations (MRO), service bureaus, convergence retailing and total facilities management.

Tridium markets its products to value-added resellers, original equipment manufacturers and a network of Tridium Systems Integrators. The company is an independent business entity of Honeywell International Inc.
