

Tridium's Niagara Framework® Surpasses 100,000 Instances

Leading device-to enterprise software platform reaches milestone

RICHMOND, VIRGINIA- March 1, 2008-Tridium Inc. the global leader in application software frameworks, automation infrastructure technology and device-to-enterprise integration solutions today announced the total number of instances for the company's Niagara Framework has surpassed 100,000 worldwide. Tridium achieved this milestone as a result of the steady growth in Niagara's customer base and the adoption of the framework as both a development platform and as an application solution.

The Niagara Framework integrates diverse systems and devices regardless of manufacturer, or communication protocol into a unified platform that is easily managed and controlled over the Internet using a standard web browser. Manufacturers adopt the Niagara platform to develop Internet-enabled equipment systems, smart devices and device-to-enterprise solutions. In doing so, they reduce development time and costs, build new service offerings, and open up new business opportunities.

System integrators throughout 43 countries use Niagara-based products to provide open, interoperable solutions without regard for specific protocols, products or technologies. Today, Niagara is deployed in a variety of applications in the building automation, security, industrial, residential, energy, retail, telecom, M2M and medical industries.

"We are very excited to reach this significant milestone -- surpassing the 100,000 mark is a testament to the Niagara Framework's industry-leading capabilities and proven performance," said Steve Fey, president of Tridium. "Reaching this milestone continues to fulfill our mission of being the leader in creating universal software frameworks that increase the functionality and value of smart devices and connect real time operational data to the people and systems that manage business enterprises".

"We are grateful to all those in the Niagara community; manufacturers, system integrators, developers, consultants and end-users who have contributed to this milestone," said Marc Petock, director, global marketing and communications for Tridium. "This achievement reflects a strong commitment from the community and our ability to consistently deliver a robust platform that is the catalyst for true device-enterprise integration, connectivity and interoperability."

About Tridium, Inc.

Tridium is a global leader in the development of application software frameworks, automation infrastructure technology and device-to-enterprise integration solutions. Our technology extends, connectivity, integration and interoperability to the millions of devices deployed in the market today and empowers manufacturers to develop Internet-enabled equipment systems and device-to-enterprise solutions.

Niagara is a software framework that integrates diverse systems and devices regardless of manufacturer, or communication protocol into a unified platform that can be easily managed and controlled in real time over the Internet using a standard web browser. Niagara is an extensible

platform that supports the rapid development of a wide range of Internet-enabled products and device-to-enterprise applications.

Manufacturers adopt the Niagara Framework technology to move their products to the web, reduce development time, migrate legacy systems, develop new service offerings, and open up new markets. System integrators use Niagara products to provide true open solutions without regard for specific protocols, products or technologies. Today, there are over 100,000 instances of Niagara operating in over 8,600 installations in 43 countries in applications that include: energy management, building automation, M2M, telecommunications, industrial, security automation, lighting control, maintenance repair operations (MRO), service bureaus, convergence retailing and total facilities management.

Sedona is the industry's first, open source software development framework that provides a complete platform for developing, integrating, connecting and managing pervasive device applications at the lower level.

The company is an independent business entity of Honeywell International Inc.
