

Control Concepts Security Selects Niagara^{AX} Framework for New IP-based Security Solution

RICHMOND, VIRGINIA, March 16, 2009 Tridium Inc today announced that Control Concepts Security, a leading provider of building automation and security systems selected the Niagara^{AX} Framework as the technology platform for iNTREO, its new IP-enabled physical security management solution.

iNTREO Security is an advanced, web-based access control and intrusion detection system that provides credential-based access control, event and alarm monitoring, time and attendance, video surveillance and building automation integration via a standard web browser from anywhere at any time. It is ideal for a single building or large multi-site applications.

The Niagara^{AX} Framework is a modular, software platform and development environment that solves the challenges associated with open systems, integration and interoperability by integrating diverse systems and devices into a unified platform that is easily managed and controlled over the Internet. Today, it is the foundation for a variety of pervasive solutions in Building Automation, Security, Industrial, Residential, Energy, Medical, Telecommunications and M2M with over 136,000 instances operating in 43 countries.

“There’s never been more focus on the need to protect buildings, assets, and employees than right now. In a dynamic world where personnel and requirements change quickly, having an IP based system built on a framework provides better security, flexibility and manageability. Tridium’s Niagara^{AX} platform provided us with a comprehensive solution that addressed these issues as well as the its ability to create more features and functions and get us to market faster, said Phillip Bailey, Security Business Manager, Control Concepts Security.

“Tridium is very excited to have Control Concepts Security adopt Niagara^{AX} as their foundation for their smart security solution”, said Marc Petock, Tridium’s Vice President Global Marketing and Communications. “iNTREO has already been installed successfully in a number of facilities where it is combining open, IP based security with building automation to meet the needs for reliability and integration of multi-vendor equipment and web access”.

About Control Concepts Security

Established in 1996, Control Concepts Security provides integrated solutions for all types of facilities including HVAC Building Automation Systems, Web-based “iNTREO” Integrated Security, Card Access Entry, Close-circuit Television and Siemens Fire and Life Safety Systems

Our customers include K-12 education facilities, colleges and universities, healthcare facilities, government and commercial buildings and industrial sites. As a result of our services, our clients enjoy reduced energy costs, extended equipment life and precise temperature and humidity control.

About Tridium, Inc.

Tridium is the global leader in open platforms, application software frameworks, automation infrastructure technology and device-to-enterprise integration solutions. Our technologies extend connectivity, integration and interoperability to the millions of devices deployed in the market today and empowers manufacturers to develop intelligent equipment systems and smart devices that enable collaboration and communication between the enterprise and edge assets.

The Niagara Framework® is a software platform that integrates diverse systems and devices regardless of manufacturer, or communication protocol into a unified platform that can be easily managed and controlled in real time over the Internet using a standard web browser.

The Sedona Framework™ is the industry's first, open source development framework that provides a complete software platform for developing, deploying, integrating, and managing pervasive device applications at the lowest level. It brings the power of programmable control and the Internet down to extremely inexpensive devices. The Sedona Framework distributes decision making control and manageability to any device and brings intelligence and connectivity to the network edge and back.

The company is an independent business entity of Honeywell International Inc.
