

**FOR IMMEDIATE RELEASE**

## **AAON releases JENEsys™ Based Controls in Select Equipment**

TULSA, Okla., June 2, 2006 – AAON Inc. announced today the availability of factory mounted controls based on JENEsys™, a new multi-protocol Internet controller. JENEsys allows AAON to specify an exact control strategy that is integration-ready, regardless of field standards used by local integrators.

“AAON equipment with JENEsys controls allow the seamless integration to a building’s energy management system, regardless of which control contractor is awarded the integration contract,” said Doug Gephart, vice president of Custom Air and Power, an AAON representative in Overland Park, Kan.

### **About AAON**

AAON, Inc. is a manufacturer of air-conditioning and heating equipment consisting of rooftop units, chillers, air-handling units, condensing units and coils. Its products serve the new construction and replacement markets. The Company has successfully gained market share through its custom and semi-custom product lines, which offer the customer value, quality, function, serviceability and efficiency.

### **About JENEsys™**

JENEsys is an Internet based control solution utilizing embedded technology.

JENEsys™, powered by Niagara<sup>AX</sup>, is a newly-designed Internet control suite developed by Lynxpring, Inc. JENEsys provides owners with a platform that will migrate to new communications strategies while protecting their original investments. This product represents a future-proof strategy that delivers a flexible point count, Web server, XML capability, OPEN APIs, JAVA programming and SQL, all in a single platform and at extremely competitive pricing.
