take your enterprise
higher
with niagara cloud

Leverage the IoT in new and powerful ways

niagara

stay at the forefront of
innovation

Connect, control and create like never before with Niagara Cloud. Our latest advancement means you can protect the enterprise from losing valuable Niagara station and configuration data, and manage your Niagara licenses from one online location.

Backup as a Service is the first Niagara Cloud offering, but it's not our last. Stay tuned for more Niagara Cloud services that can help you leverage the Internet of Things in new and powerful ways.

keep pace
with the speed of
open

Rapid forward progress is a hallmark of technology that's truly open. By pairing Niagara with a Software Maintenance Agreement (SMA) from Tridium, you have the opportunity to get the latest updates, builds, patches and upgrades at no additional cost — keeping Niagara current and secure, and your business on the cutting edge.

Now, the first of our Niagara Cloud services also will be included at no additional cost with your SMA. Keeping your SMA current allows instant access to Backup as a Service (BaaS) — a fail-safe environment for your data. As we build out our Niagara Cloud suite, SMAs will feature base options of some of our future offerings, also at no additional cost.

Getting the most out of your Niagara purchase begins with getting the latest advancements as we venture further into the Internet of Things.

Now more than ever, the best opportunity you have to reduce risk and stay current is to pair Niagara with an SMA

manage your niagara
licenses
from one spot

The Niagara Community website comes with a powerful tool for accessing device backups via Backup as a Service and tracking your Niagara software maintenance expirations from one online location. By providing a centralized, brand-agnostic view of all Niagara license information — complete with automatic push notifications of maintenance expirations and renewals — our asset manager tool can help you stay on top of licensing for all of your projects.

KEY ADVANTAGES
OF ASSET MANAGER

- Automatic push notifications of maintenance expirations and renewals
- Centralized, brand-agnostic view of all Niagara license information
- Easy access to specific device details through filters
- Access to Niagara Licensing through single login
- Access to device backups via Niagara Cloud Backup as a Service

24/7/365

a fail-safe
environment
for your data

Backup as a Service, our first Niagara Cloud offering, is available to users of Niagara 4.3 with a current Software Maintenance Agreement. BaaS provides seamless, secure and scalable backups of Niagara to the cloud — 24/7/365.

With BaaS, you can reduce downtime, data loss, labor costs and your enterprise's risk.

BaaS KEY ADVANTAGES

- Initiate backups with 1 GB of online storage; serves 6–12 average-sized backups; Supervisors can back up 5 GB of data

- Automated/scheduled and on-demand backups provide you with peace of mind, knowing you can manually initiate or automate them, and have the backups whenever needed

- Add notes to help you remember the context of each backup — what was changed — to restore the most relevant backup

- Secure data encryption in motion and at rest

- Ability to set up notifications for failure in backing up so that no backup failure goes unnoticed

- Geo-located backup service gives you the highest throughput and lowest latency by connecting to the nearest Niagara Cloud server, wherever you are located worldwide

- Soft backup limits so that you're never denied an on-demand backup, even when the storage limit is exceeded; backup now, and the space is automatically freed from the oldest backups

- Niagara Cloud Services are compatible with Niagara 4.3+

For more than 15 years, Tridium has led the world in business application frameworks — advancing truly open environments that harness the power of the Internet of Things.

Our innovations have fundamentally changed the way devices and systems connect to people — and the ways people can control and optimize those machines.

Our products allow diverse monitoring, control and automation systems to communicate and collaborate like never before. From buildings and data centers to manufacturing systems and smart cities, Tridium is changing the rules for automation technology.

We are committed to creating smarter, safer and more efficient enterprises and communities — bringing intelligence and connectivity to the network edge and back.
