MONITORING
NIAGARA STATION
WITH DATADOG

VAYANDATA

CONTEXT

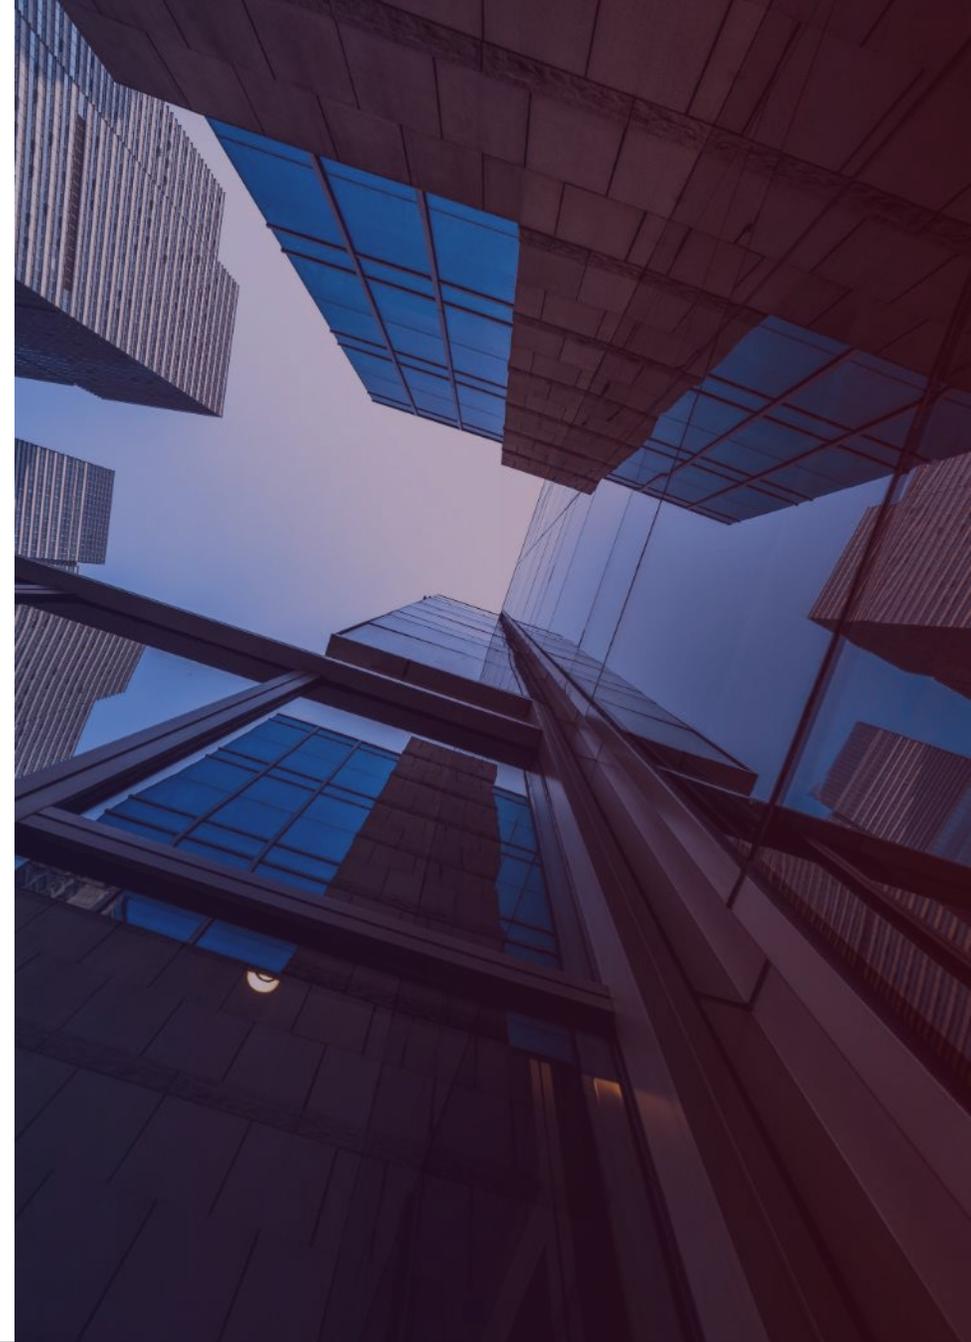

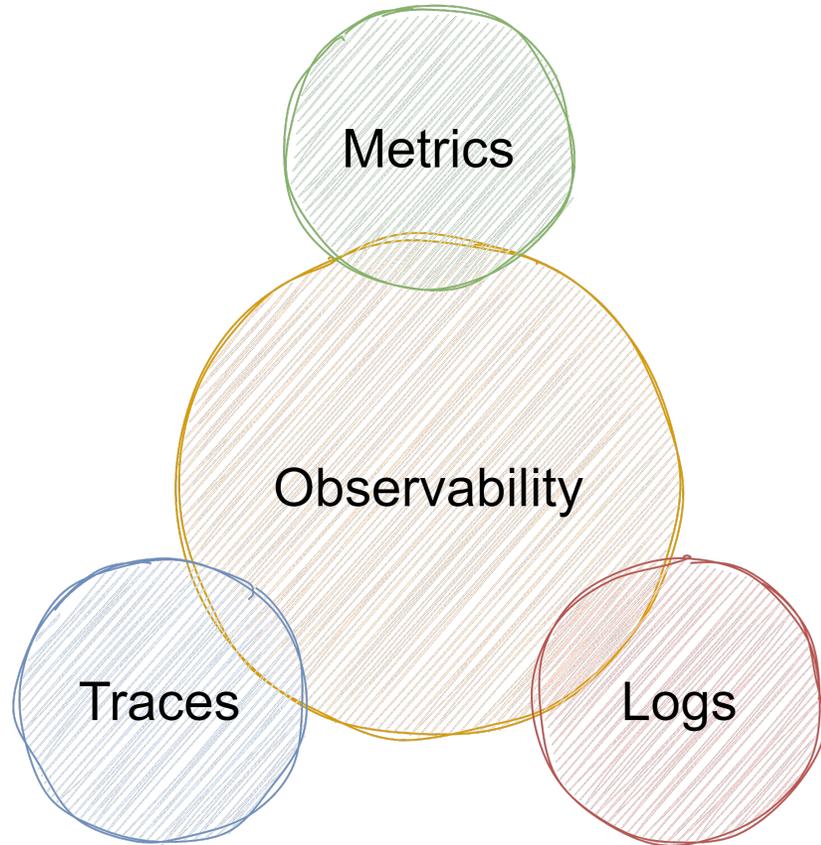

We deploy more and more Niagara stations across Europe and we need to keep them operational.

But so many things can go wrong:

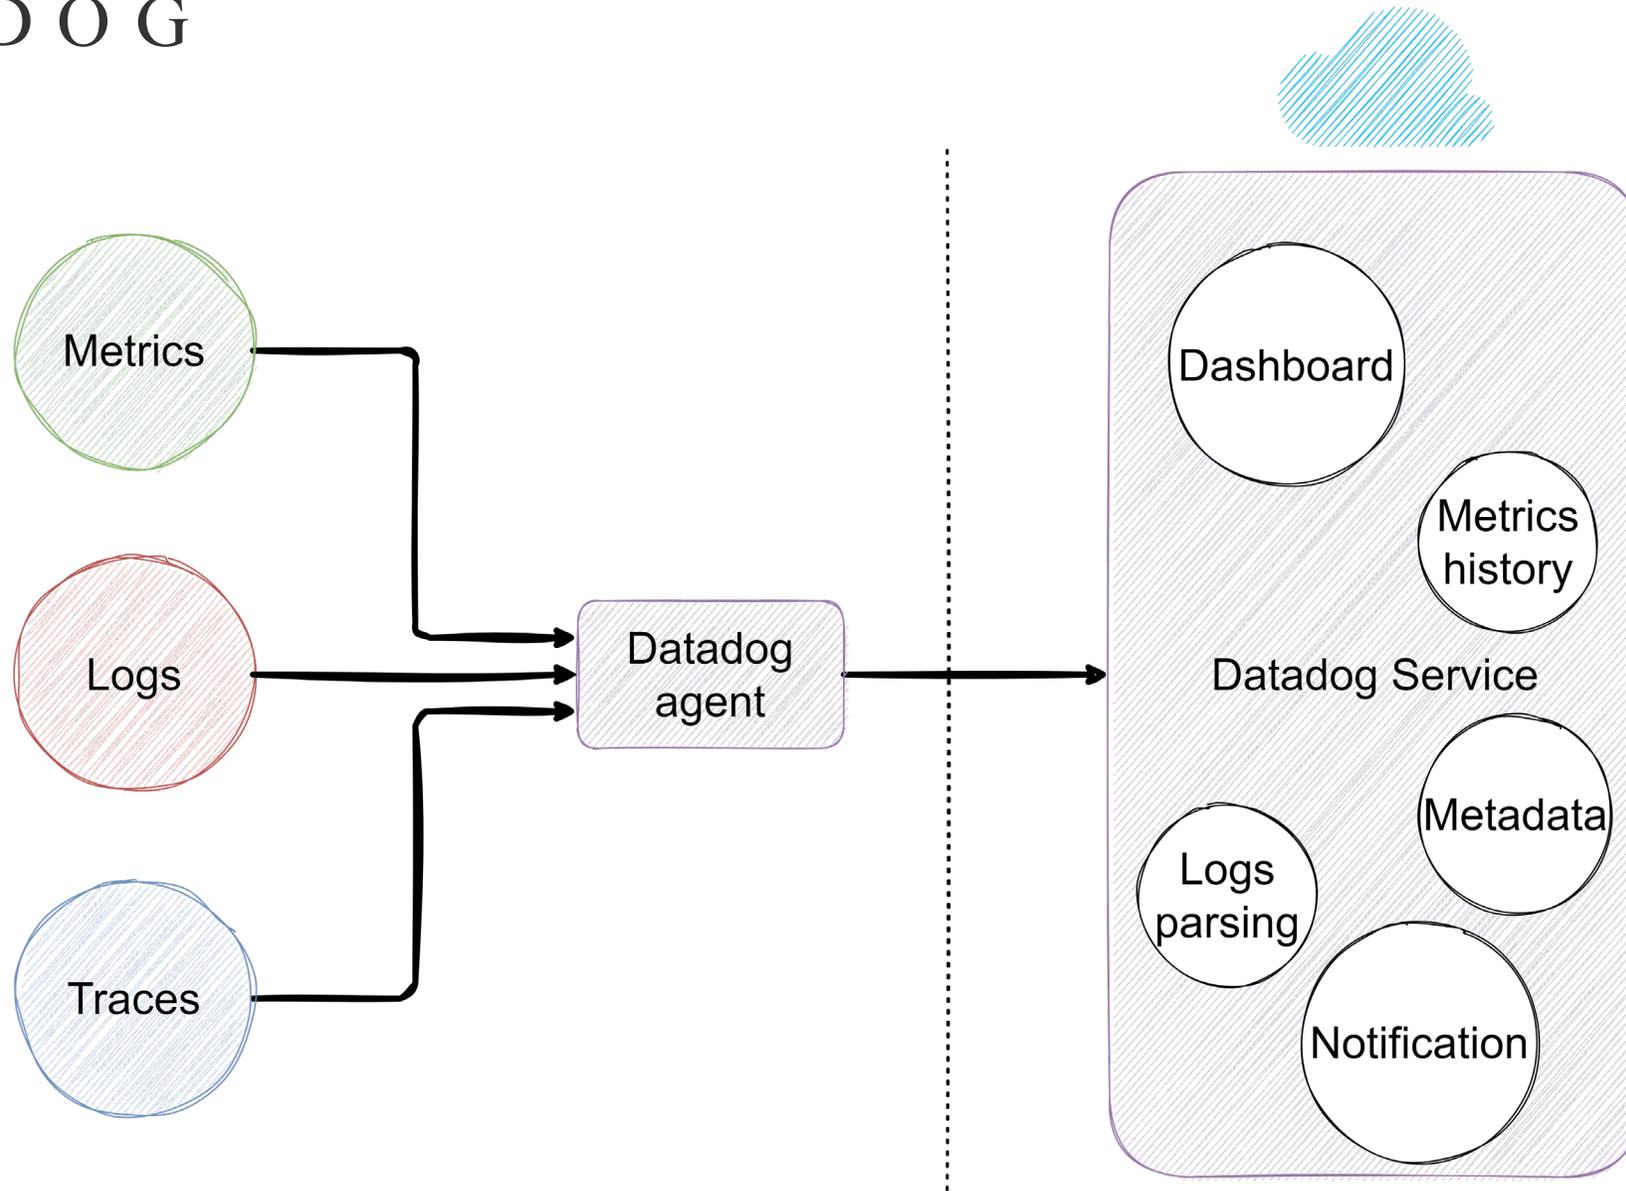

- Watchdog timeout
- Internet connection issues
- Station is stopped manually and never restarted
- NTP synchronisation issue
- Certificate expiration
- And so on ...

OUR ANSWER : OBSERVABILITY

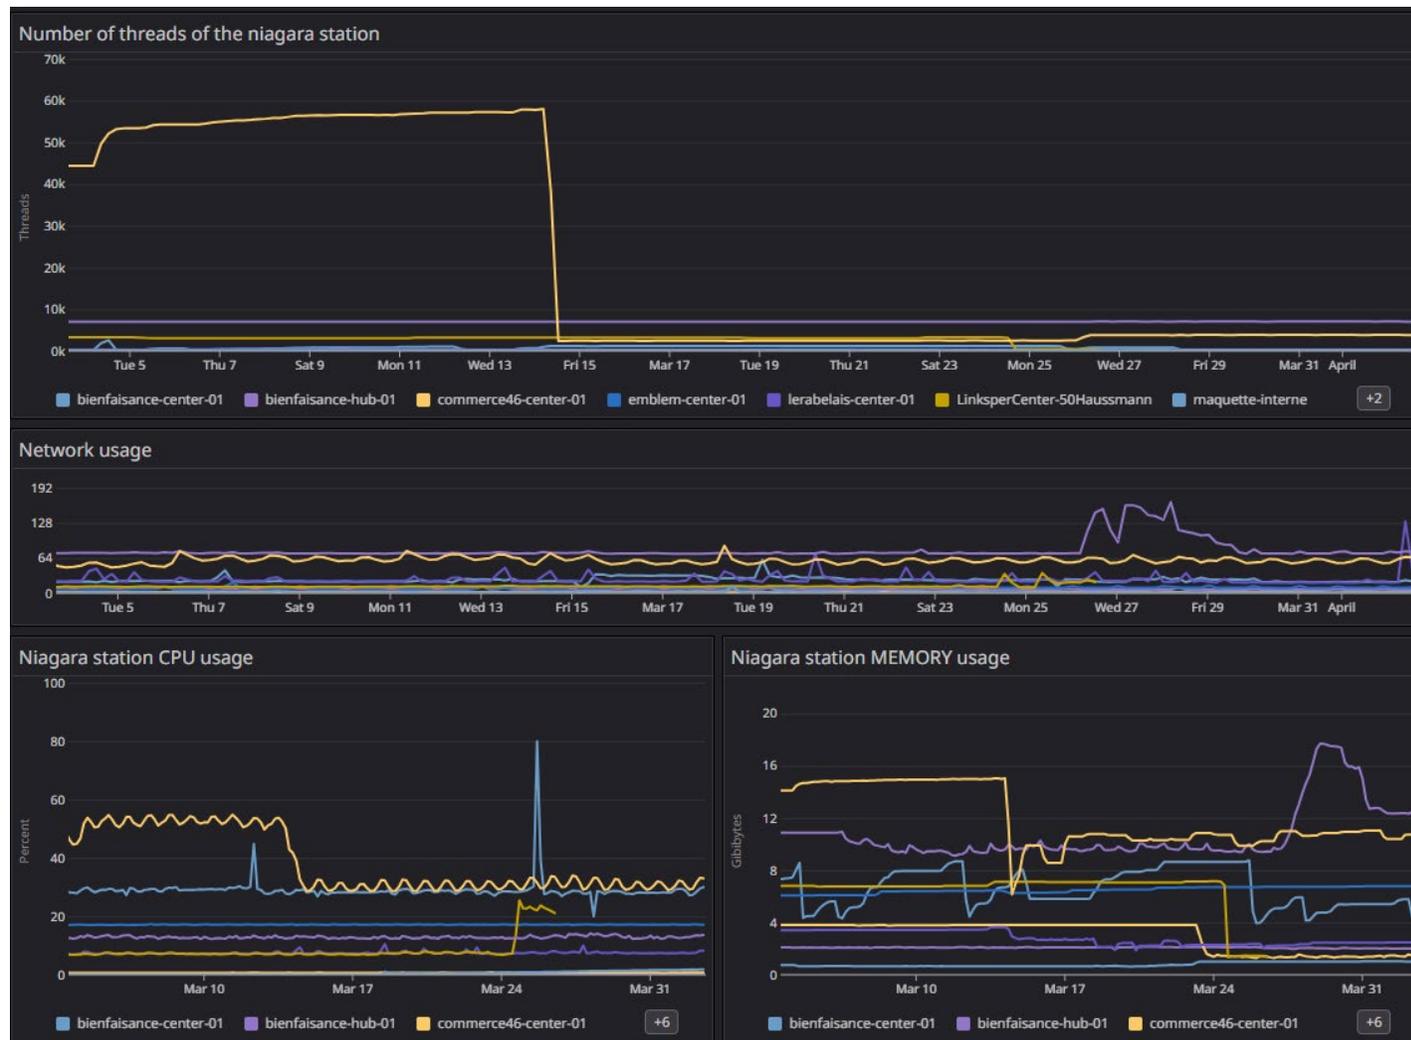

DATADOG

HOST METRICS

- CPU Usage
 - Total
 - Niagara station
- RAM Usage
 - Total
 - Niagara station
- Network Usage
- Time Synchronization
- Niagara Process (station/platform)
 - Status
 - Uptime
- Niagara Station threads number

NOTIFICATIONS

- When ?

- Threshold reached
- Abnormal behavior
- Process down
- ...

- How ?

- Email
- Slack
- Zendesk Ticket
- ...

Mute	Resolve	Delete	Edit Tags	Edit Teams

				CPU very high for the last 30 minutes for the host {{host.name}}

[P2] Triggered: Restart of the Niagara station on host 7georgev-center-01

[@ghairapetian@vayandata.com](mailto:ghairapetian@vayandata.com) [@opoumeyrol@vayandata.com](mailto:opoumeyrol@vayandata.com)
Please check if the niagara station restart was planned.
Else, it might be a Niagara watchdog trigger. Please investigate.

system.processes.run_time.min over host:7georgev-center-01,process_name:niagara_station was ≤ 120.0 at least once during the last 1m.

[View Event in Datadog](#)

[P3] Triggered: [TEST] CPU very high for the last 30 minutes for the host bastioni-center-01

NIAGARA LOGS : WEB

The screenshot shows the Niagara Configuration Manager interface. The left sidebar displays a tree view of the configuration hierarchy, with 'JettyWebServer' selected under 'Services'. The main area shows the 'Property Sheet' for 'JettyWebServer (Jetty Web Server)'. The properties are as follows:

Property	Value
Server State	started
Min Threads	8 [8-30]
Max Threads	30 [18-max]
Thread Idle Timeout	000000h 05m 00s [1second - +inf]
Denial Of Service Settings	Jetty Do S Filter
Quality Of Service Settings	Jetty QoS Filter
Connection Limit	Jetty Connection Limit
Accept Rate Limit	Jetty Accept Rate Limit
Inet Access Handler	Jetty Inet Access Handler
NCSA Log	NCSA Request Log
Enabled	false
Retain Days	7 [1-max]
Extended Format	true
Log Cookies	false
Log Time Zone	UTC (+0)
Diagnostics Enabled	false

The screenshot shows the Niagara webLogs interface. The breadcrumb path is 'Niagara.413 > TridiumEMEA > stations > S2_PPR > webLogs'. A search bar is present. Below the search bar, there is a table listing log files:

Name	Date modified	Type	Size
2023_11_23.request.log	11/23/2023 5:47 PM	Text Document	0 KB
2023_11_24.request.log	11/24/2023 1:44 PM	Text Document	0 KB
2023_11_27.request.log	11/27/2023 3:55 PM	Text Document	0 KB
2023_11_28.request.log	11/28/2023 3:41 PM	Text Document	0 KB
2023_11_29.request.log	11/29/2023 11:56 AM	Text Document	5 KB

The screenshot shows a web browser displaying the raw log output for the selected log file. The log entries are as follows:

```

NIAGARA TRACES : THE CHRISTMAS GIFT

- Perm it to know which Java method consume a lot of CPU in real time
- Not able to use it for now because it needs to use a jar as a java agent and it is against Tridium Java Security Policy.
- Maybe one day ? Please ?
