# Containerised Niagara Explained

*Jacqueline Walpole / Tridium*

*Paul Fahy / Tridium*

*Peter Shepherd / Forest Rock*

# What is a Containerized Niagara?

hello

# Niagara Deployment Platforms

IP & RS485

IP & 485 plus onboard IO

Supervisor

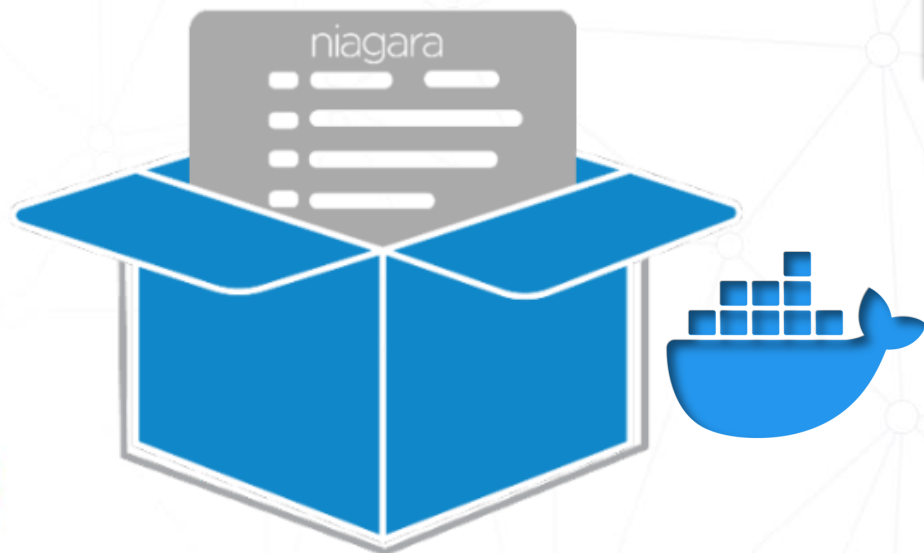

IP Integration Platform  
/Building Controller

Plant Room Controller

Small Plant/AHU/RTU  
Equipment Controller

VAV/Terminal Unit/Room  
Controller

Portability

# What is a container?

- Containers are technologies that allow the packaging and isolation of applications with their entire runtime environment and all of the files necessary to run.
- This makes it easy to move the contained application between environments (dev, test, production, etc.) while retaining full functionality.\*

# Where can Containerized Niagara be utilised?

## EMBEDDED HARDWARE

- For OEMs managing connected devices such as routers and hubs using a container management system, containers can facilitate **easy remote deployment** and **updating of Niagara**
- Portability alternative - embedded deployment whereby a Niagara development partner deploys Niagara containers on its own proprietary or a third-party commercial device

Connected Container  
Orchestration Platform

**CONTAINERIZED  
PORTABLE NIAGARA  
(NCC-CPN)**

# Where can Containerized Niagara be utilised?

## CLOUD

- Supervisor deployment in a cloud service

## ON PREMISE

- Supervisor deployment on a server device housed locally

## CONTAINERIZED SUPERVISOR (NCC-SUP)

Cloud or Data Centre

# Benefits of a Container?

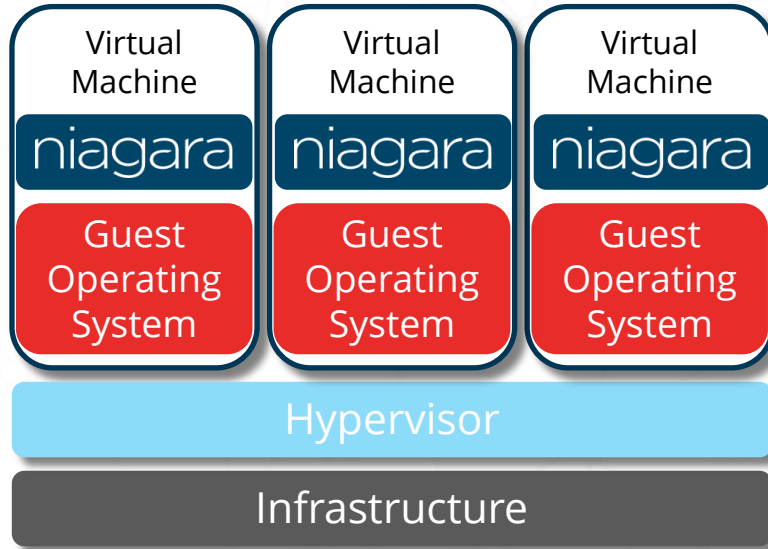

hello

# Benefits of containers over VMs?

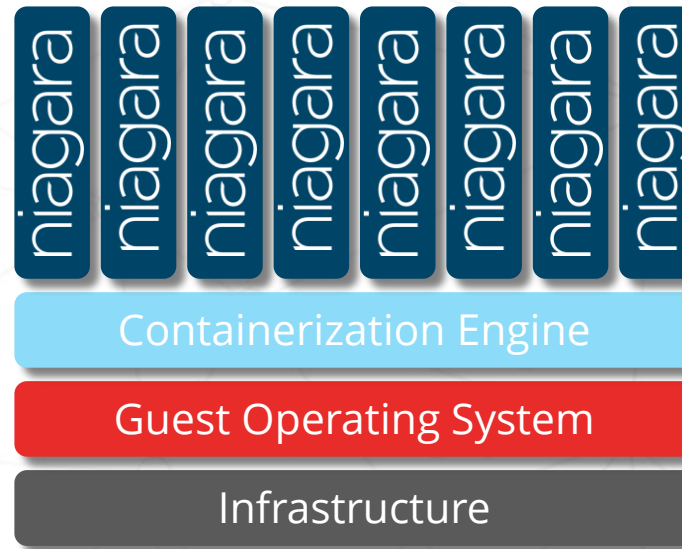

## Virtual Machines

Formerly Popular for Virtualization

## Containers

Now Popular for Virtualization

### Lightweight:

- Shares the host's OS system kernel
- Does not require an OS per application
- Driving higher server efficiencies
- Reduces server and licensing costs

### Secure:

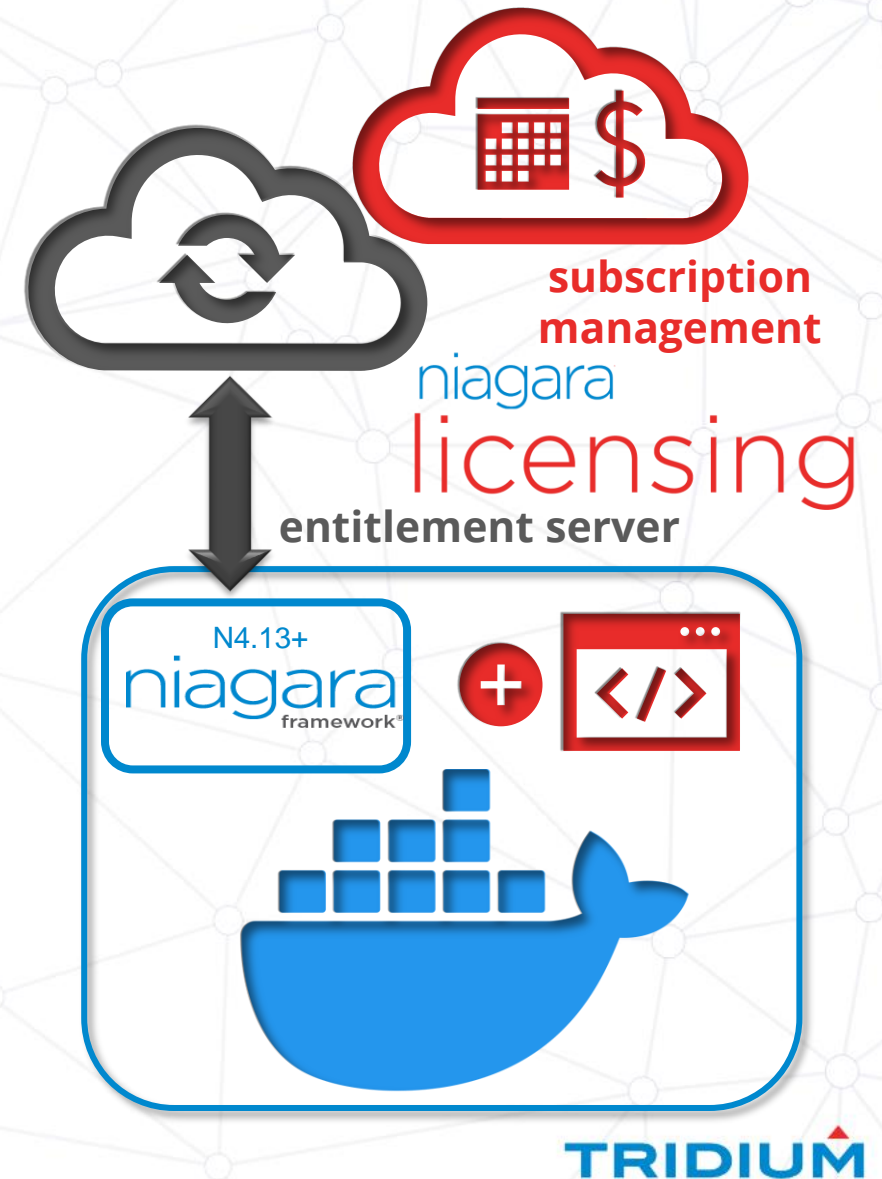

- Applications are safer in containers and provides the strongest default isolation capabilities in the industry

Containers are less resource intensive and more portable than Virtual Machines.  
Can ease development, deployment and upgrades.

# Containerised Niagara

- Niagara Framework supplied in a Docker™ container
- Support for AMD\_x86 and Arm64 architecture
- Partner OEMs can add their own applications as required prior to the deployment of their container
- As the container is commissioned, it will contact the Tridium **Entitlement Server** to authorize install, deploy license, and stay activated
- Containerized Niagara was launched with N4.13 as a subscription only service

# Subscription Licensing

## SaaS Subscriptions:

- OPex rather than CAPex
- Less outlay - Less commitment
- SMA included in subscription

**More purchasing flexibility!**

niagara  
licensing

- NOTE: A subscription Niagara instance will perform a system exit—that is, it will stop working—if subscription renewal is not paid.

# Subscription Licensing

The screenshot displays the 'Subscription Console' dashboard in the Niagara Licensing system. The interface includes a top navigation bar with links to Marketplace, Community, Software, University, and Tridium. Below this is a secondary navigation bar with tabs for Organization, Production, Products, Licenses (selected), Orders, and Software. A search bar is located on the right side of the navigation bar. The main content area features a grid of 16 license status cards, each displaying a count, license type, and status.

Count	License Type	Status
388	Niagara Cloud Suite Subscriptions	Active
69	Niagara Cloud Suite Subscriptions	Pending Renewal within 90 days
4	Niagara Cloud Suite Subscriptions	SMA Pending Renewal within 90 days
420	Niagara Cloud Suite Subscriptions	Expired
49	Niagara Cloud Suite Subscriptions	Expired SMA
80	Niagara Subscription Licenses	Active
23	Niagara Subscription Licenses	New Enrollments processed within 90 days
24	Niagara Subscription Licenses	Pending Renewal within 90 days
244	Niagara Subscription Licenses	Last check in > 3 days
189	Niagara Subscription Licenses	Expired
240	Niagara Subscription Licenses	Pending Activation
240	Niagara Subscription Licenses	Disconnected > 14 days
242	Subscription SW Options	Active
51	Subscription SW Options	Pending Renewal within 90 days
13	Subscription SW Options	SMA Pending Renewal within 90 days
1108	Subscription SW Options	Expired

# Containerised Niagara

Paul Fahy - Tridium

hello

# What about containerized Niagara?

## Supported Architectures

- ARM favors simplicity and fast execution of single instructions.
- Uses less power and produces less heat.
- Ideal for embedded devices.

ARM  
64

AMD  
x86

- The x86 processors allow you to perform several activities at the same time from a single instruction.
- Used predominately in servers and PCs.

# What about containerized Niagara?

- The File Domain Authentication (FDA) version is similar to how JACE is managed today
- Connect with Workbench client using default platform credentials
- Use the wizard to change the default platform credentials and passphrase similar to how a JACE is provisioned out of the box.
- Workbench client can be used to manage the passphrase and platform credentials using the platform administration view

## Authorization Models

File  
Domain

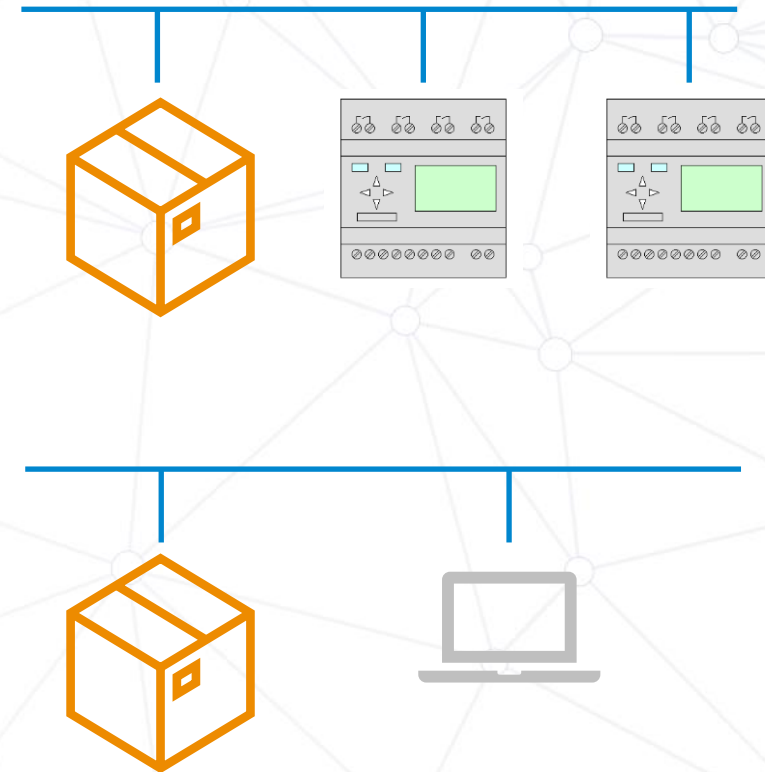

Native  
Domain

- The Native Domain Authentication (NDA) based version requires configuring the passphrase and platform credentials using either environment variables passed into the container runtime or using platform\_password and system\_passphrase files which are located under a volume which the container has access to
- This uses tools such as Kubernetes Secrets to manage all credentials
- Ideal for large scale deployments of Niagara

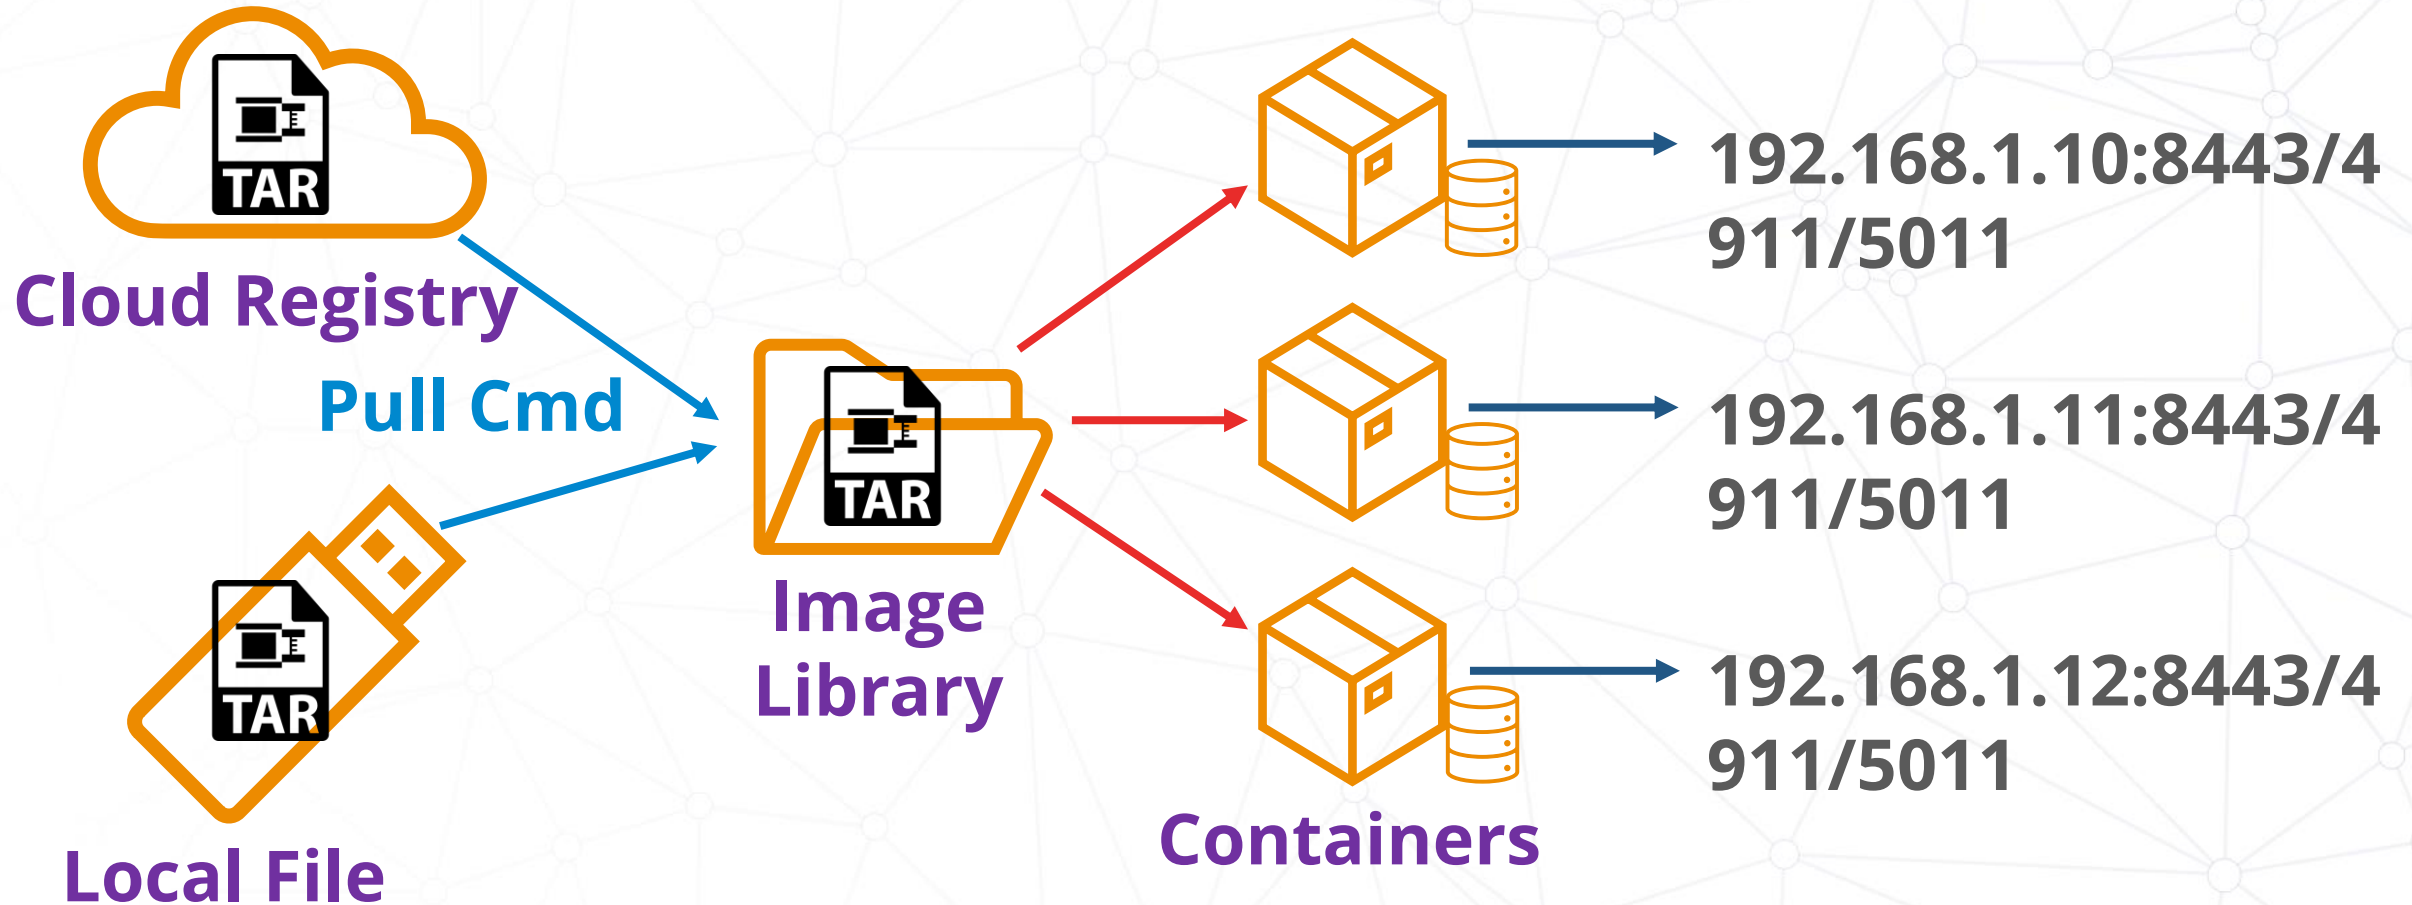

# Worth noting

- Supervisor Container Models only support IP drivers
- Containers provide headless JAVA runtime
- Remote Workbench environment required to commission
- Browser support for station viewing and configuration

# Container Workflow

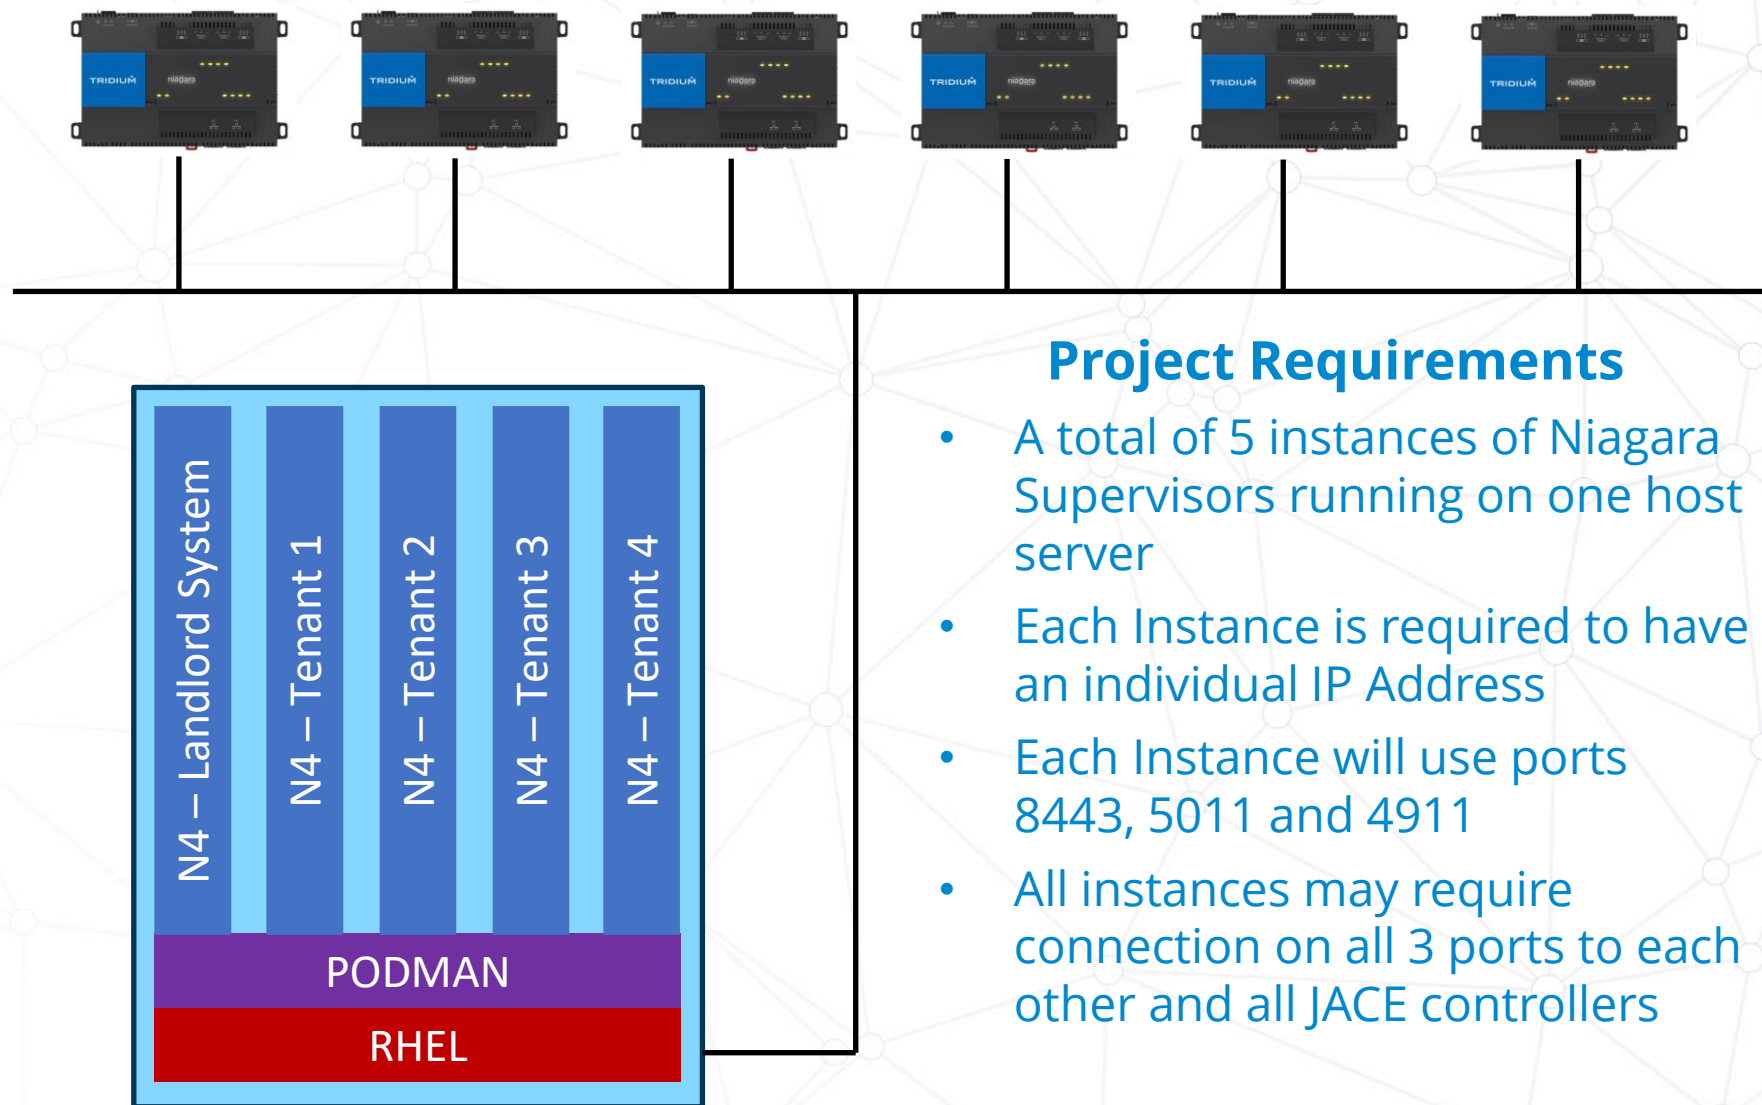

# Deployment Example

## Multi-Tenant Building

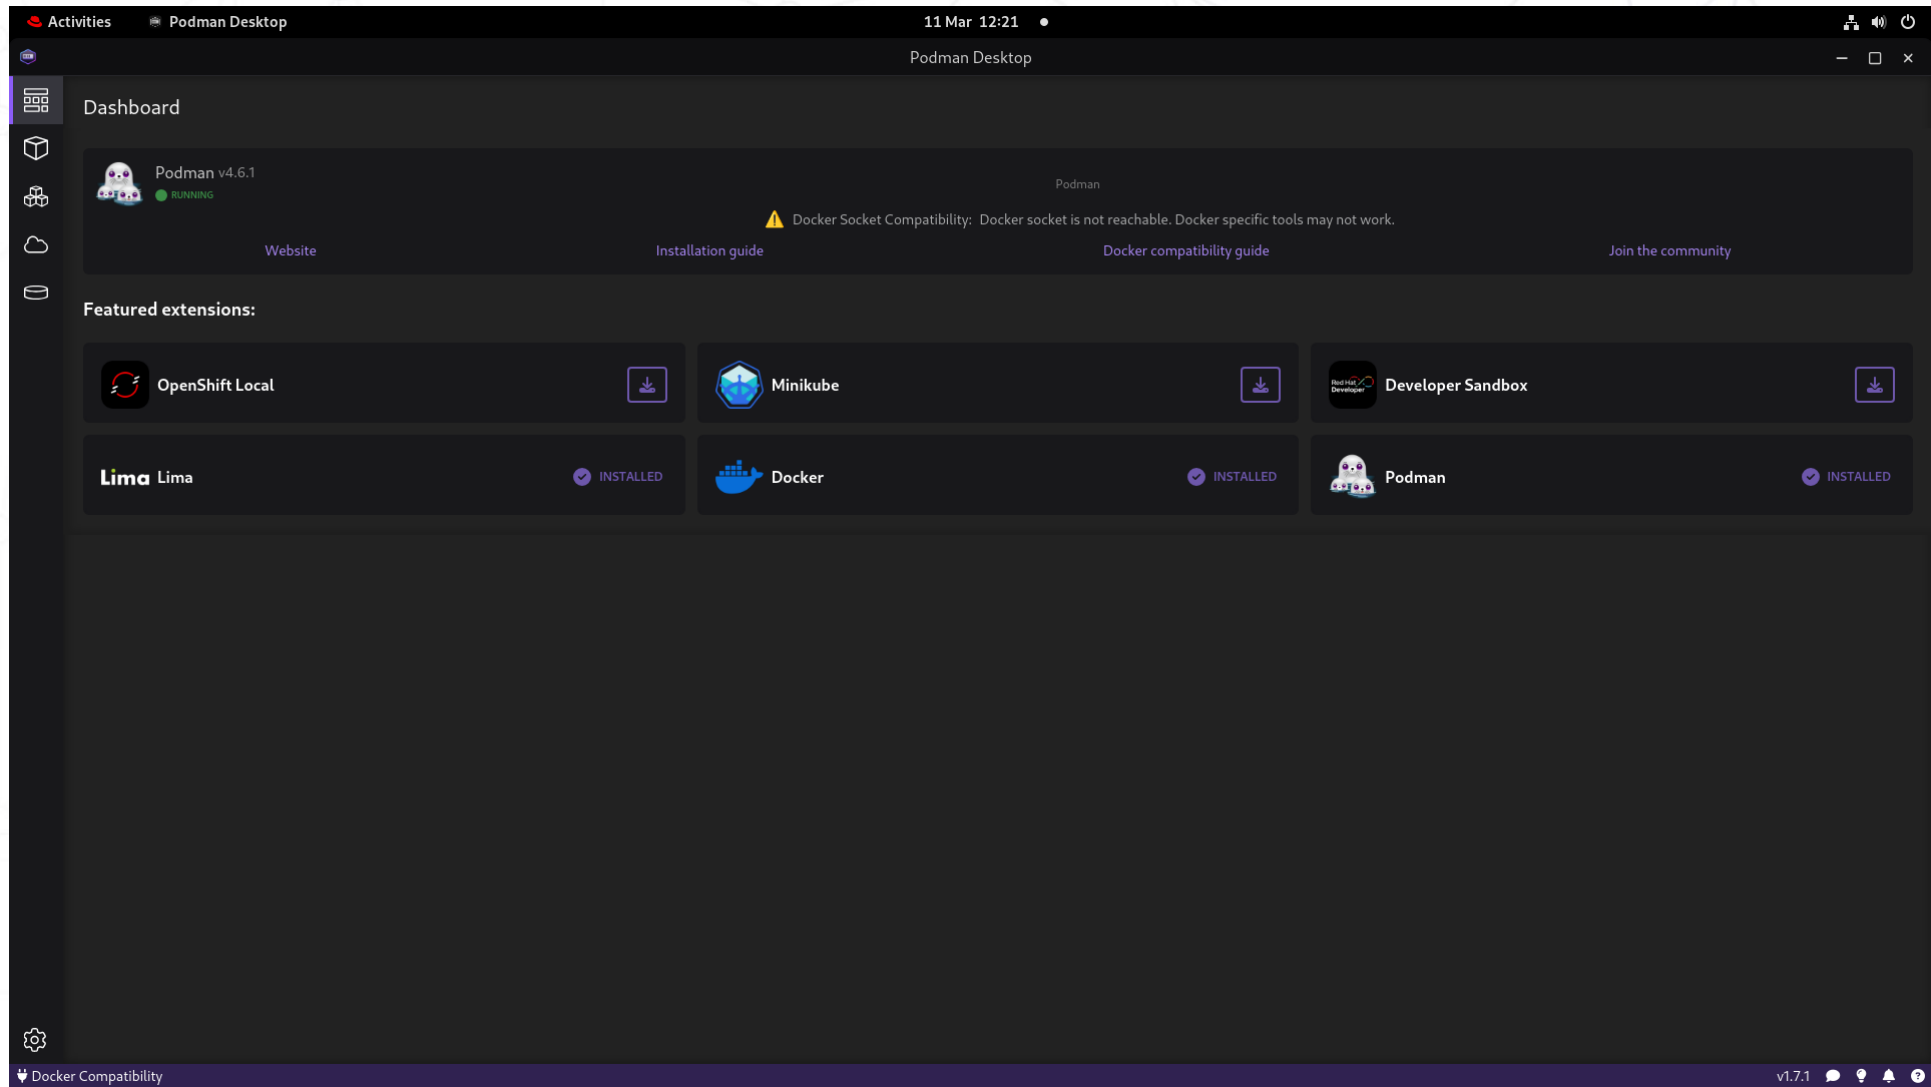

hello

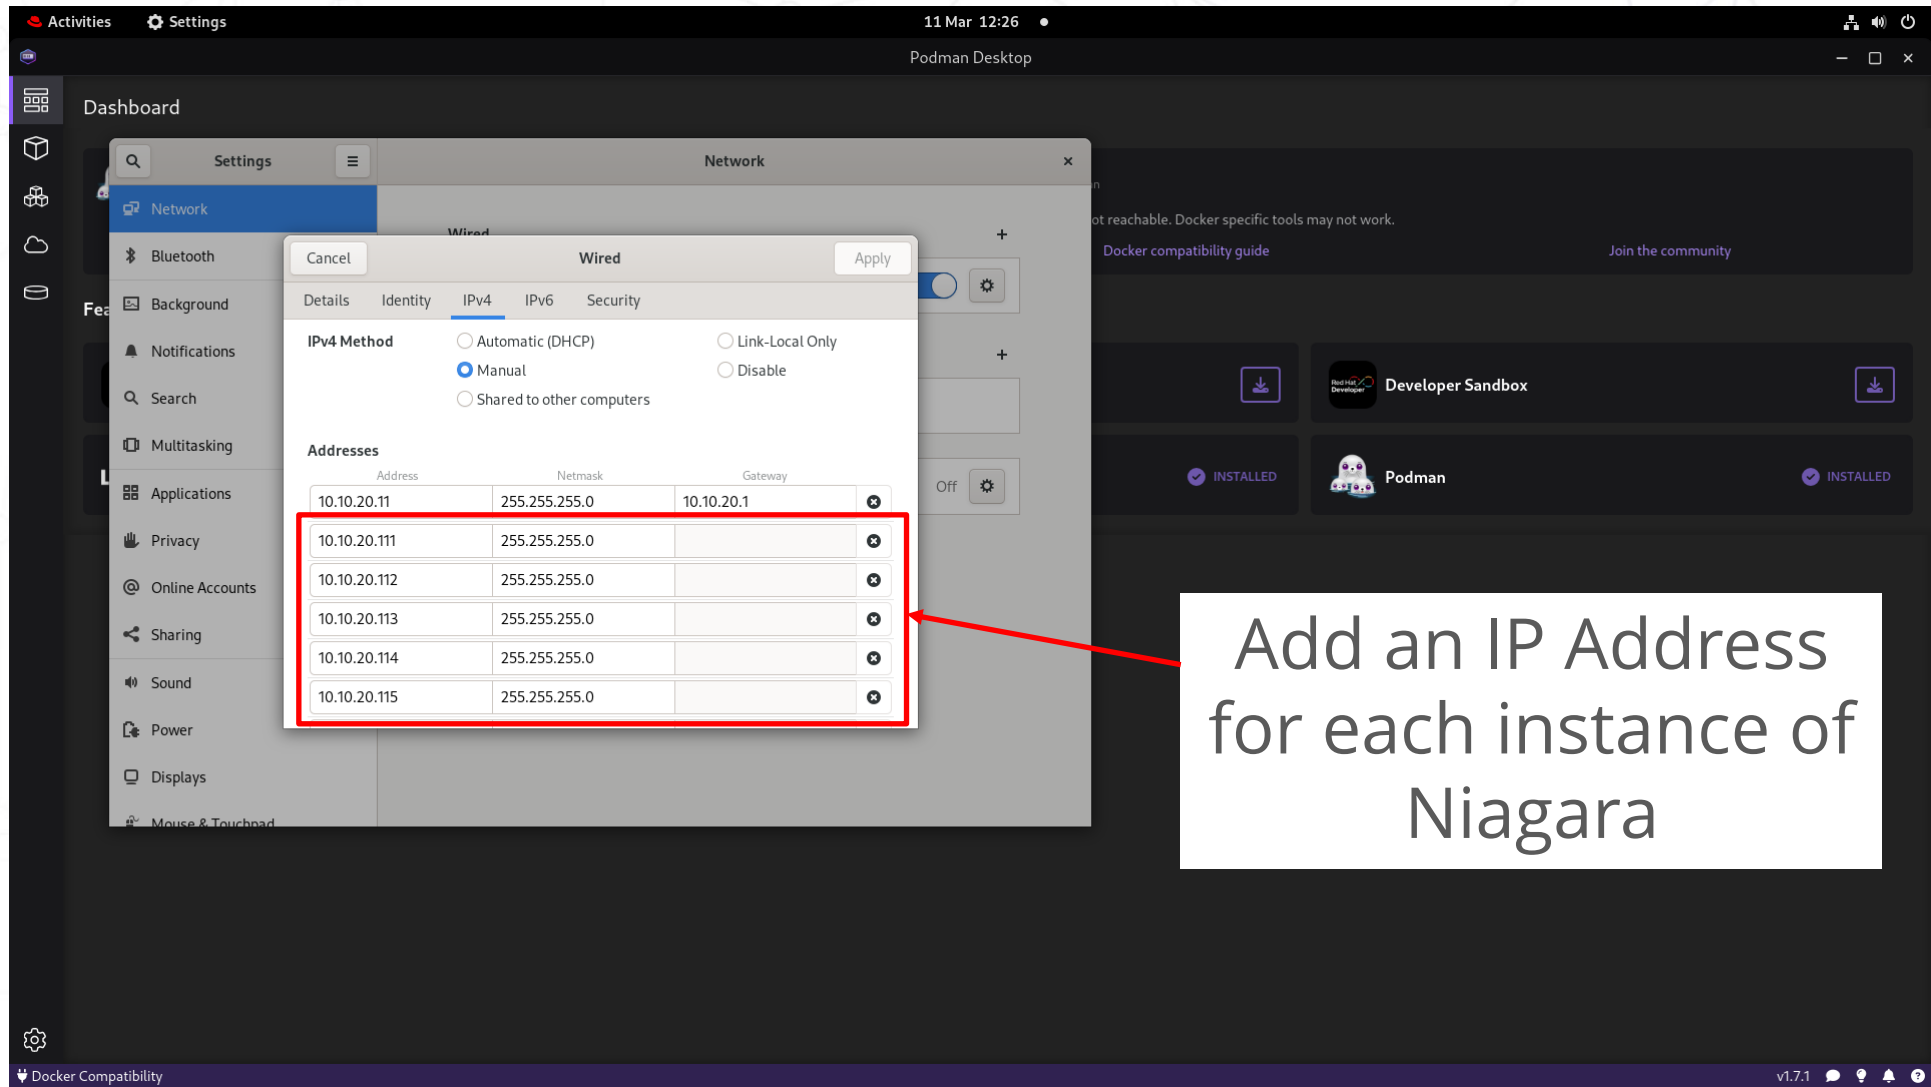

## Project Requirements

- A total of 5 instances of Niagara Supervisors running on one host server
- Each Instance is required to have an individual IP Address
- Each Instance will use ports 8443, 5011 and 4911
- All instances may require connection on all 3 ports to each other and all JACE controllers

Add an IP Address  
for each instance of  
Niagara

# Time To Delivery

# A Layered Approach

# Customer Case Study

***“We no longer have the expertise to effectively run our customer solutions, how can you help . . . ?”***

## Review

- Evaluate existing hosting capacity
- Understand solutions
- Recommend capacity

## Planning

- Plan migration strategy
- Co-ordinate on licencing
- Provision containerised environment

## Migration

- Migrate stations
- Migrate DNS
- Validate connections
