

Tridium EMEA to Host 2011 Niagara Forum

UNITED KINGDOM - January 12, 2011 - Tridium Europe/Middle East, Africa will host its bi-annual Niagara Forum on March 28 - 29, 2011 at Wokefield Park in Reading, England.

The Niagara Forum is an extension of the Niagara Summit, an open exchange and conference on open automation infrastructure technology, device-to-enterprise integration and connectivity and smart devices and services.

This is the major business event for the Niagara Community throughout the Europe, Middle East and Africa regions. This year's conference theme, 'The Journey Continues', reflects the continued growth and popularity of the Niagara Framework and the company's emerging Sedona Framework.

The Forum includes separate session tracks for Business and Technical focus, and offers an exhibition area for related products and services within the Niagara and Sedona Ecosystem. Session tracks will have topics of relevance and interest for everyone - business leaders, technical and developer engineers as well as specifiers.

In addition to seeing first hand the latest products and developments of what is to come in the future with the Frameworks, attendees will also meet and engage with International experts and listen to what they have to say about the industry and markets. Attendees will also have the opportunity to learn from other members of the Niagara Community on how they have built successful new Business Models and created unique Applications with the Niagara and Sedona Framework.

About Tridium Inc.

Tridium is the global leader in open platforms, application software frameworks, automation infrastructure technology, energy management and device-to-enterprise integration solutions. Our technologies extend connectivity, integration and interoperability to the millions of devices deployed in the market today and empowers manufacturers to develop intelligent equipment systems and smart devices that enable collaboration and communication between the enterprise and edge assets.

The Niagara Framework® is a software platform that integrates diverse systems and devices regardless of manufacturer, or communication protocol into a unified platform that can be easily managed and controlled in real time over the Internet using a standard web browser. By integrating today's diverse building systems such as environmental controls, security, lighting, energy, video, fire and life safety, Niagara is creating better buildings---ones that are smarter, use less energy, are more efficient, have lower operating costs, are safer and contribute to a sustainable environment.

The Sedona Framework™ is the industry's first, open source development framework that provides a complete software platform for developing, deploying, integrating, and managing pervasive device applications at the lowest level. It brings the power of programmable control and the Internet down to extremely inexpensive devices. Sedona distributes decision making control and manageability to any device and brings intelligence and connectivity to the network edge and back.

The company is an independent business entity of Honeywell International Inc.
