

Tridium Expands Communication Service Provider Unit and Enhances Solution Offering

RICHMOND, VIRGINIA February 2, 2012-Tridium the global leader in software frameworks, automation infrastructure technology and device-to-enterprise integration solutions and developer of the Niagara Framework is pleased to announce the expansion of its business unit that focuses on Operational Intelligence solutions for Communications Service Providers (CSP).

Capitalizing on Tridium's M2M software frameworks, this business unit offers both standard and customized solutions that address the unique challenges of Communications Service Providers. In addition to delivering complete solutions built on the Niagara Framework®, this group includes a team of developers, application engineers and project managers who build custom solutions, including connecting and web enabling legacy infrastructure systems as well as assistance with deployment and ongoing support.

As an Operational Intelligence Platform for Communication Service Providers, the Niagara Framework® has inherent capabilities to connect and collect data from a multitude of devices and systems at the enterprise edge, then seamlessly aggregate and normalize the various data sources for centralized management and control. Analytic and control dashboards can be accessed in existing enterprise views or from a laptop, tablet or smart phone using standard web browsers.

This unique capability to integrate operational data from multiple organizational silo's including network operations, real estate operations and enterprise M2M connections on to a single platform creates new levels of operational intelligence that benefit Communication Services Providers in multiple ways including:

- Enterprise-wide energy management to *increase Operational Efficiency and Reduce Costs*
- Predictive alerting to avoid events and *increase Network Reliability*
- Real time intelligence to *improve Response, Recovery and Efficiency of Field Operations*

With a highly successful track record that includes over 2000 deployments in 47 countries, Tridium's CSP unit has a proven record of creating and supporting new and unique solutions in environments that deliver real value to the challenges faced by today's Communications Service Providers.

In conjunction with the business unit expansion, Tridium has also released new enhancements to its telecommunication solution offerings with the addition of a TL1 Driver and the Device Appliance.

The TL1 Driver allows the Tridium Telecom JACE® to communicate alarm messages to the OSS Enterprise System used by 80% of the U.S. market.

The Device Appliance allows contractors and carrier staff without Niagara training to perform installs and move additions and changes at the site level using simple step by step navigation. The Device Appliance benefits include; improvements in speed and simplicity of installations, greater flexibility on the type and configuration of devices and for carriers, the ability to independently and remotely make modifications to device configuration throughout its lifecycle.
