## Press Announcement

### **Tridium's Niagara<sup>AX</sup>® Supervisor Receives BACnet<sup>©</sup> European Certification**

*Software Framework is the First Advanced Workstation and Operator Workstation to Receive BTL Listing and European Certification*

**RICHMOND, Virginia February 29, 2012** - Tridium announced today that its Niagara<sup>AX</sup> Advanced Workstation (AWS) and Operator Workstation (OWS) have received European BACnet Certification. Both are approved and listed by BACnet Testing Laboratories (BTL) as meeting and conforming to the BACnet standard ISO 16484-5/ANSI ASHRAE 135.

The Niagara<sup>AX</sup> Advanced Workstation and Operator Workstation previously received BTL listing and now are the first Advanced Workstations and Operator Workstations to receive both BTL Listing and European Certification. These listings and certification represents the highest level of functionality and provide users with maximum monitoring, control, configuration, commissioning and presentation choices. In addition, it also ensures for the utmost integration with BACnet systems.

The BACnet certificate is proof of BACnet conformity and compliments the BTL mark. The BTL mark is the international symbol for BACnet conforming products, ensuring that software and devices meet the BACnet standard and ensure the testing process has been completed against a valid BACnet standard by an accredited testing laboratory. The certification provides reassurance that the Niagara<sup>AX</sup> Advanced Workstation and Operator Workstation meet BACnet standards.

"We have supported interoperability and the BACnet protocol for a long time; this additional certification demonstrates that we continue to carry on the BACnet standard and its latest implementations", commented Marc Petock, vice president, global marketing and communications for Tridium.

The BACnet Certificate can be viewed at: <http://www.big-eu.org/conformance/eu/index.php>.

#### **About Tridium**

Tridium is the global leader in open platforms, application software frameworks, automation infrastructure technology, energy management and device-to-enterprise integration solutions. The company's technology and applications have fundamentally changed the way devices and systems connect, integrate and interoperate with each other and the enterprise.

Tridium's configurable software frameworks extend connectivity, integration and interoperability to the millions of devices deployed in the market today and empowers manufacturers to develop intelligent equipment systems and smart devices that enable collaboration and communication between the enterprise and edge assets. Our platforms allow for building and managing complex monitoring, control, and automation solutions, including applications for energy management, telecommunications, M2M and smart services building control, facility management, industrial automation, medical equipment, physical security,.

The company is an independent business entity of Honeywell International Inc.
