access control and security
built for the IoT
Introducing a security system that meets integrated and efficient building requirements

The safety of occupants and the security of assets—these are the two highest priorities for building owners. And once those immediate needs have been taken care of, the list continues—from reducing energy consumption to gaining greater operational efficiency.

With Niagara Enterprise Security, you can have it all—an access control and security application that lets you centralize your operations and unify your building ecosystem, while protecting everything inside.

Powered by the Niagara Framework®, Tridium’s open software platform for the Internet of Things, Niagara Enterprise Security seamlessly integrates with building control systems. The robust distributed architecture of Niagara Enterprise Security is scalable from a single JACE® 8000 controller to large enterprise systems managed on Niagara Supervisors. The same intuitive user interface that allows users to create custom reports and graphics is hosted on both the Supervisor and JACE.

Tame the network jungle and clear the way to an integrated and efficient building that meets current requirements and offers best-in-class access control and security. It all begins with Niagara Enterprise Security.
niagara enterprise security goes beyond access control for total integration

- Complete systems integration through Niagara or standard BACnet® protocol
- Real-time occupancy control to reduce energy consumption
- Consolidated building intelligence on a single dashboard
- Database integration API for centralized management of logical and physical access
- Integrated video surveillance
For more than 15 years, Tridium has led the world in business application frameworks—advancing truly open environments that harness the power of the Internet of Things.

Our innovations have fundamentally changed the way devices and systems connect to people—and the ways people can control and optimize those machines.

Our products allow diverse monitoring, control and automation systems to communicate and collaborate like never before. From buildings and data centers to manufacturing systems and smart cities, Tridium is changing the rules for automation technology.

We are committed to creating smarter, safer and more efficient enterprises and communities—bringing intelligence and connectivity to the network edge and back.

Niagara Enterprise Security is available through a wide variety of original equipment manufacturers. Our open distribution business model and open protocol support allow a vendor-neutral application compatible with devices and systems throughout the world.

To learn more about how to purchase and install Niagara Enterprise Security, or if you are an original equipment manufacturer and would like to add this to your suite of offerings, please contact us.
