Tridium Launches First Phase of Niagara Cloud with *Backup as a Service (BaaS)*

*The new service is included at no additional cost with
a Niagara Software Maintenance Agreement*

Richmond, Va., September 29, 2017 – Tridium Inc., a global Internet of Things (IoT) software technology leader, today announced the launch of its first Niagara Cloud offering, Backup as a Service (BaaS). BaaS provides seamless, secure and scalable backups of Niagara to the cloud — 24/7/365 — giving users a fail-safe environment for data.

With BaaS, Niagara users can easily configure JACE® controllers to perform automated secure backups to the cloud with a simple approach that reduces the amount of effort for backup management and storage.

"With the launch of Backup as a Service, we're equipping our partners and customers with state-of-the-art tools for robust, secure backups of their Niagara systems," said Jim Bland, president and general manager of Tridium. "With BaaS, if a customer has a device failure or physical emergency, it will be easier than ever to get back up and running quickly."

Manage device backups and enterprise licenses using one convenient web-accessible tool
Niagara users will be able to access device backups via BaaS using the new asset manager tool, to be introduced soon on the Niagara Community website.

Beyond accessing device backups via BaaS, the asset manager tool will help users simplify license management and recoup valuable time. Other key advantages include:

- Automatic push notifications of maintenance expirations and renewals
- Centralized, brand-agnostic view of all Niagara license information
- Easy access to specific device details through filters
- Single login using Niagara Community credentials

Niagara 4.3 users with an up-to-date SMA get immediate access to Backup as a Service (BaaS) at no additional cost. BaaS is available starting July 12 in the Americas and EMEA, and in the Asia Pacific region in late 2017.
