

Tridium Releases Update to Security Patch

August 31, 2012

Tridium is releasing an update to its August 10 patch for NiagaraAX versions 3.5 and 3.6.

This Security Patch is now available and updates the previous patch. Tridium strongly recommends ALL customers apply the new patch, including those customers who installed the August 10 patch.

Note Regarding Appliances and other 3rd party content:

This patch is not available for the Niagara Enterprise Security (access control) products. These products will require separate patches to be available at a later date. Tridium recommends users manually apply the configuration changes listed in the release notes when possible.

Tridium strongly recommends all NiagaraAX Framework® users apply this patch to any existing 3.5 or 3.6 systems to correct this vulnerability. Customers with Niagara systems older than 3.5 should upgrade to the latest version of the Niagara Framework software, to take advantage of the latest security features.

The patched modules along with details about the patch and installation instructions are available on Niagara Central at:

https://www.niagaracentral.com/ord?portal:/dev/wiki/Niagara_AX_3.5_and_3.6_Security_Patches
(access required)

The patch includes several enhancements to the overall security of NiagaraAX. It is important to note this patch includes many changes to the default settings for existing NiagaraAX security features with the goal of making NiagaraAX more secure-by-default. As a result, applying this patch may change the behavior of existing systems. Please review the list of changes to default settings when applying the patch and make any necessary configuration changes in your system to ensure the system functions as desired.

Tridium understands the importance of providing a securable software framework to its customers. Whenever critical security issues are discovered, Tridium is committed to taking the appropriate steps to resolve them quickly.
