

Temporary workaround available for Niagara weather service-related issue

The National Weather Service recently made server modifications that redirect all HTTP requests to HTTPS for 'alerts.weather.gov'. This has uncovered an issue that causes the JACE® to repeatedly reboot.

Tridium has published a [Knowledge Article](#) detailing a temporary workaround while we are developing a permanent solution. We are working to resolve the issue as quickly as possible, and we will update the Niagara Community as soon as a permanent solution is available.
